

INSTALLATION INSTRUCTIONS:

Plantra® AviGard® Easy-Fit™ Square Mesh Bird Net

SUPER PREMIUM (HEAVY) GAUGE

STEP 1 Remove Bundle Ties

Open package and remove ties used to bundle net during transport. For largest nets this may be done while net is still in the bag. If using a knife or scissor to cut bundle ties be careful to avoid cutting the net.

STEP 2 Unfold Net

Super Premium Easy-Fit Nets are folded to accommodate the heavy duty, reinforced selvedge material on the long sides. The 17 ft x 100 ft and 25 ft x 100 ft nets must be completely unfolded before installing. The 500 ft net can be opened and installed at one end of the row before unfolding further during installation. Two corners on the same long side are flagged to mark the net ends.

STEP 3 Install Easy-Fit Net

Easy-Fit Canopy Nets can be installed on hoop structures, frame structures or directly on rows of plants. If cutting to fit shorter rows < 100ft, install netting from one end of the row leaving about 10ft-15ft of extra net at the beginning of the row. After installing net the entire row length, leave another 10ft-15ft of net beyond the row end. Doing so will leave a “cushion” of extra netting to help compensate for future canopy growth. For longer rows, those beyond 100ft, a good rule of thumb is to leave 5%-10% of extra net on each row end.

Storage Note: Avigard Easy-Fit Bird Nets are for seasonal use only. To achieve proper field life, store Easy-Fit Bird Nets in a dry location protected from sunlight.
